## NUTRIBIO HORSE

Nutribio Horse is a highly palatable premium lick formulated to bridge the mineral and vitamin gap of all types of horses in light to medium work, unsupplemented mares and young stock on pasture alone. It is particularly suited to any horse on pasture.

Research has shown that from the start of the summer there is a dramatic fall in copper and zinc levels in grass, during this time a good quality vitamin, mineral and trace element supplement should be made available to help bridge the nutritional gap.

Nutribio Horse block contains optimum levels of balanced premium minerals, vitamins and protected trace elements for maximum availability in a highly palatable form.

**SUITABLE FOR:** all types of horses

### KEY BENEFITS AND FEATURES

- Helps prevent bone and teeth development issues, rough hair, scaly skin, hoof development and infertility problems.
- Contains premium ingredients with full traceability and is manufactured under a UFAS approved quality system.

### NUTRIBIO HORSE LICK CONTAINS A FULL COMPLEMENT OF ESSENTIAL VITAMINS AND MINERALS INCLUDING:

- **Vitamins:** A, B1, B2, B6, B12, D, E, K, Biotin and Folic Acid.
- **Minerals:** Calcium, Phosphorous, Magnesium, Copper, Iodine, Selenium, Manganese, Zinc and Cobalt.

The Nutribio Horse Range is formulated based on the latest scientific research and forage analysis in line with current EU legislation.

### PACK SIZES

Nutribio Horse is available in both a 12kg block and a 25kg bag (powdered form).

Also available from the Nutribio Horse range is **Nutribio Horse & Garlic** mineral lick which contains all of the same essential vitamins and minerals as the standard mineral lick but also has the added benefit of the inclusion of garlic which can help to repel flies and boost circulatory and respiratory systems.

### USAGE INSTRUCTIONS

#### Feeding Directions

**Mineral Lick:** 100g – 125g/head/day.

**Mineral Bag (powdered):** 125g/head/day.

### GENERAL USAGE INSTRUCTIONS

#### Mineral Lick:

- With reasonable access allow one block per five horses to ensure adequate daily intakes.
- A common practise is to place blocks in a car tyre at the desired feeding site.
- Intakes are stimulated by placing the blocks near a water trough.
- If intakes are excessive, blocks should be rationed by putting out a set amount at pre-determined intervals.

**Caution:** Do not exceed the daily intakes guidelines. No additional complementary trace element supplements should be fed without nutritional/veterinary advice. This block contains high levels of copper and should not be fed to sheep. It also contains high levels of selenium so care should be taken in known high selenium areas.

#### Mineral Bag (powdered):

- Complementary feeding stuff to be used as a top dress or mixed in feed including TMR.

**Caution:** this mineral contains copper and should not be fed to sheep. Do not exceed the daily intake guidelines.
